Vulnerability Assessment Report

Local Lab (self-test) — LAB-SELFTEST

Generated 2026-09-25 | Period: 2026-09-19 to 2026-09-19

Executive Summary

No vulnerabilities were identified by the automated assessment. This does not guarantee the absence of issues — automated scans detect known patterns only. A manual penetration test is recommended for high-value assets.

Methodology

Non-destructive, rate-limited automated scanning (recon, safe-template vulnerability checks). Excluded template tags: dos, brute-force, fuzz, intrusive.

Findings Summary

Severity	Count
Critical	0
High	0
Medium	0
Low	0
Info	0
Total	0

Findings Detail

Appendix — Scope & Audit

Targets: 127.0.0.1
Authorization signed by: lab operator (self)
Audit trail entries: 3 (full log in audit.log)
Template categories used: 0
